

ENTERPRISE CYBERSECURITY

Cyber Threat Operations Center

A unified dashboard ecosystem for SOC analysts, fraud teams, and cybersecurity leadership, built to compress mean-time-to-detect, cut alert fatigue, and translate technical risk into board-ready language.

FUSION KILL CHAIN, THE SOC FLOOR'S FIRST SCREEN EACH MORNING

THE BRIEF

Thirteen dashboards, *one system*

A bank's threat operations live across fragmented, alert-noisy tools.

The work spans three very different audiences, the analyst on an overnight shift, the investigator chasing a lead, and the executive who needs a board-ready read on risk.

A self-directed concept: I framed the domain, defined the terminology, designed a shared UI system, and built thirteen interlocking dashboards as a single, coherent product.

ROLE

Product Designer

AUDIENCE

SOC / Fraud ops
CISO / Executive

DOMAIN

Enterprise Cyber - Banking

SCOPE

Framing & IA
UI system - Prototype

STATUS

Hi-fi prototype

SYSTEM

1 design system - 13 views

CHALLENGE

Signal, buried in *noise*

Three structural problems shaped every decision, each became a design constraint rather than a feature request.

81

Alert fatigue

Analysts drown in undifferentiated alerts. Severity has to be unmissable, and readable at a glance, color-blind safe.

82

Fragmented tools

Detection, incidents, fraud, and intel live in separate apps. The analyst is left to stitch the story together.

93

Risk ≠ board language

Leadership needs technical risk translated into exposure, trend, and decisions, not raw event counts.

THE HERO • FUSION KILL CHAIN

Every stage of an attack, *on one timeline*

The dashboard the team turns on first: live kill-chain progression, fused signals, and the single most urgent thing to do next.

APPROACH

One system, *three layers*

The product is organized into three tiers that mirror how the work actually flows, from the live SOC floor, to deep investigation, to the executive read. Shared chrome and one severity language hold all thirteen views together.

01

The SOC floor

Real-time monitoring built for an eight-hour overnight shift, glanceable, low-fatigue, severity unmissable.

02

Investigation

Deep-dive views for incidents, fraud, insider risk, DLP and intel, every alert opens the same triage dashboard.

03

The executive read

Risk translated into exposure, posture, and trend, board-ready language, not raw event counts.

04

One severity language

Five levels, encoded in more than one channel so it stays legible and color-blind safe everywhere.

THE TRIAGE WORKFLOW

Click any alert, *anywhere*

One consistent right-side drawer opens over every dashboard, context, evidence, and the next action, without losing your place.

THE ECOSYSTEM

The other *twelve*

Every dashboard inherits the same chrome, top bar, sidebar, time-range, KPI area, so moving between them never costs a re-orientation.
