

Designing clarity & control for complex systems where error *isn't an option.*

Senior product designer, builder, and inventor shipping high-consequence UX across cyber-physical IoT, regulated real-money platforms, AR field tooling, and enterprise B2B SaaS. I work in highly collaborative, engineering-first teams where UX is the bridge, the shared language that keeps product, design, and build aligned, and where design earns a founding voice. 3 issued patents, 1 pending.

// AEGIS • WATCH FLOOR • CLASSIFICATION DRILL

Arctic Shield is the intercept trainer: the AI senses, you decide. Drop sensors, ID contacts, never fire on a guess. The other three drills are watch-floor classification challenges: Fusion Watch teaches you to read the evidence behind the confidence score, Sweep • Watchkeeper makes you call contacts in a heartbeat, and Watchfloor: Last Light is survival. Hold the line as long as you can.

What People Say

Feedback from colleagues I've had the pleasure of working with.

★★★★★

I had the pleasure of working directly with Robert on multiple initiatives, and he is an exceptional UI/UX designer who truly understands both design and the technical realities behind it. He has a strong grasp of design thinking and consistently transforms abstract ideas into intuitive, working prototypes. Robert invests time in clearly understanding requirements before proposing solutions, ensuring the final experience is both user-friendly and technically feasible. He has a sharp eye for usability, clarity, and interaction detail. His ability to bridge product vision, user needs, and engineering constraints makes collaboration seamless. Any team would benefit from his creativity, structure, and user-first mindset.

GD **Gunjan Dave**
Engineering Manager

★★★★★

I had the pleasure of working with Robert at Parlay Gaming, where he excelled as a Lead Designer. Robert is an incredibly talented and detail-oriented designer with a keen eye for creating visually stunning and user-focused designs. His ability to turn complex ideas into intuitive and engaging interfaces consistently elevated the quality of our products.

Robert's collaborative approach and dedication to excellence made him a joy to work with and a key contributor to our team's success. He was always open to feedback and worked tirelessly to ensure that every design element aligned with the project's vision. I highly recommend Robert to any organization looking for a skilled and innovative design leader.

GE **Gavyn Elrick**
Senior Full Stack Engineer

★★★★★

I want to recognize our small but powerful UX/UI team for the strong synergy we've built across multiple projects. Our design discussions are always constructive, supportive, and focused on delivering great user experiences. A special thanks to our lead designer Robert Babiarz for his constant support, valuable insights, and mentoring whenever we need it. Grateful to be part of such a collaborative and inspiring team.

CP **Chetan Patil**

COLOPHON · BUILD RECORD

[VIEW SOURCE ON GITHUB](#) ↗

SITE EST	DEPLOYMENTS	LAST DEPLOY	VERSION	UPDATED
Jun 22, 2026	188	Jul 18, 2026	v1.11.113	Jul 19, 2026

BUILT WITH Anthropic Claude Code · Playwright · Figma + MUI kit · Cursor · Python 3 · React 18 (CDN, no build step) · Git → GitHub Pages

ARCHITECTURE 29 self-contained pages, ~78,000 hand-authored lines, zero npm dependencies, no bundler — every page is a single file that opens anywhere and deploys as pure static hosting. The interactive layer is bespoke vanilla JS: a photometric engine scored against real parking uniformity targets, an AI AutoLayout demo with ranked candidates, playable decision drills, and client-side search over a Python-generated index. WCAG 2.2 AA target with a standing audit; three-tier design tokens (primitive → semantic → component).

AI-PAIRED Human-led, AI-accelerated: designed and engineered in pair with Anthropic Claude Code, with Playwright browser automation verifying every change — the same receipts-over-vibes workflow the case studies argue for. 11 case studies, several of them about designing AI systems people can trust.
